ACKNOWLEDGEMENT

As we near the completion of this project, it is essential to acknowledge and express gratitude to everyone whose support and guidance have been invaluable. Completing such a comprehensive project would not have been possible without the collective efforts of many individuals. Success in endeavors like this is never a solo achievement. It is the result of teamwork that steers the journey toward its destination.

We extend our heartfelt thanks to all the esteemed individuals whose contributions and encouragement have made this project an enriching and successful experience.

We are deeply grateful to our Department, J.P. Dawer Institute of Information Science & Technology, Surat, for providing us with this exceptional opportunity to work on a real-time project.

Our sincere thanks go to Kamlendu Pandey, our professor and project coordinator, for his unwavering support and guidance throughout our academic journey. His insightful direction, problem-solving approach, and readiness to provide advice have been instrumental in shaping our ideas into reality. We are deeply indebted to his for his invaluable contributions.

Lastly, we would like to express our appreciation to everyone who has been a part of this project, whether their contributions were significant or small, direct or indirect. Your cooperation has been vital in bringing this system to fruition.

Thank you all.

Priyanka V.Vastarpara
Dhruvi M.Vavadiya

1. Introduction

BookMyTable is a system designed to enhance the restaurant dining experience by enabling users to reserve tables and order menu items online.

This system simplifies restaurant management while providing customers with convenience and flexibility through a user-friendly online platform.

1.1 Objective of the System

- Streamlining the table reservation and menu ordering process
- Providing customers with real-time table availability and booking options
- Enhancing user convenience with remote reservations and pre-ordering options
- Reducing waiting times and ensuring better customer satisfaction
- Improving restaurant operational efficiency and resource management
- Supporting customer feedback and review mechanisms for continuous improvement
- Minimizing the need for manual intervention in administrative tasks
- Promoting a digital approach to restaurant management, benefiting both customers and businesses

1.2 Problem Definition

- The traditional restaurant reservation process often involves manual calls or walk-ins, leading to inefficiencies and delays.
- Customers face difficulties in finding available tables at their preferred restaurants, especially during peak hours or busy seasons.
- Managing reservations manually increases the chances of overbooking, miscommunication, and errors.
- Customers lack a convenient way to explore menus, check prices, and pre-order food before arriving at the restaurant.
- Restaurants struggle with long wait times, overcrowding, and inefficient allocation of resources due to the absence of an automated system.
- The lack of a centralized platform makes it difficult for customers to discover and book tables across multiple restaurants in a city.
- Restaurants face challenges in collecting feedback from customers, which is crucial for improving services and food quality.
- Traditional methods do not support real-time updates, making it hard to adapt to last-minute changes or cancellations.
- Manual record-keeping for reservations and orders adds administrative burdens for restaurant staff.

- Limited technological integration restricts the ability of restaurants to optimize operations and offer a seamless customer experience.

1.3 Core Components

- **User Management System:** Allows customers to register and log in to the platform, enabling them to book tables, order from menus, and provide feedback. Restaurant owners can create accounts to manage their restaurant profiles, tables, menus, and reviews.
- **Restaurant and Table Management:** Enables restaurant owners to add their restaurant details, upload images, define table availability, and update menus, including prices and cuisines.
- **Reservation and Menu Ordering System:** A centralized system for customers to browse and book available tables in restaurants city-wide or state-wide. It also supports pre-ordering menu items for a seamless dining experience.
- **Search and Filter Features:** Allows users to search for restaurants based on city, cuisine type, or price range. These features make it easy for users to find their preferred dining options.
- **Image and Price Display:** Provides visual representation of restaurants and menus, helping users make informed decisions by viewing restaurant images, menu items, and their prices.
- **Feedback and Review Mechanism:** Enables customers to provide reviews and ratings for restaurants and menu items, allowing restaurant owners to improve their services based on customer feedback.

1.4 Project Profile

Project Title	Online table reservation and menu ordering system(BookMyTable)
Front-End	JSF, Prime Faces
Back-End	MySQL 5.7.16
Hardware Requirement	Processor of 800 MHz Pentium (R), Minimum 512 MB RAM and Above, Minimum 40 GB Hard Disk and Above and Mouse, Keyboard.
Software Specification	Front End Software: Net beans-13 Back End: MySQL 5.7.16 Operating System: Windows 10
Development Tools	Net beans-13, MySQL 5.7.16
Submitted By	Ms. Priyanka Vipulbhai Vastarpara

1.5 Advantages of the Proposed System

Advantages:

- **Flexibility:** Customers can book tables and order menus anytime, anywhere.
- **Convenience:** Explore restaurants, view menus and prices, and book tables online.
- **Cost-effectiveness:** Saves time and reduces operational costs for restaurants.
- **Time Management:** Automates reservations and orders, minimizing waiting times.
- **Enhanced Experience:** Provides detailed information about restaurants and real-time availability.
- **Improved Communication:** Encourages feedback and reviews for service improvements.
- **Efficiency:** Simplifies management of tables, orders, and reviews for restaurant owners.

1.6 Future Enhancement

- **Mobile App Development:** Build a dedicated mobile application for BookMyTable to enable users to book tables, order menus, and manage restaurant operations conveniently on their smartphones or tablets.
- **AI-Powered Recommendations:** Implement AI algorithms to suggest restaurants, cuisines, or dishes based on user preferences, search history, and location.
- **Multi-Language Support:** Add multilingual capabilities to make the platform accessible to a diverse audience across different regions.
- **Event Management Support:** Extend functionalities to include booking tables for special occasions or events, like parties or corporate meetings, with custom menu options.
- **Enhanced Analytics:** Provide advanced data insights for restaurant owners, including customer behavior analysis, peak booking times, and menu item popularity.
- **Integration with Delivery Services:** Collaborate with food delivery services to allow customers to order dishes from their favorite restaurants for home delivery.
- **Voice-Enabled Assistance:** Introduce voice commands for faster and hands-free table reservations and menu exploration.

1.7 Project Scope

Admin :

-  Login
-  Can manage cities
-  Can manage states
-  Can manage users and restaurants
-  Can view restaurants ratings
-  Can manage cuisines
-  Logout

Owner :

-  Login/Register
-  Can add restaurant details and photos
-  Can add cuisines
-  Can manage restaurant tables
-  Can manage menu items of restaurant
-  Can manage orders
-  Can manage bookings
-  Can see reviews
-  Logout

User :

-  Login/Register
-  Can search restaurants according to cuisines
-  Can search restaurants city or state wise
-  Can see menu and photos of restaurants
-  Can add review and see reviews
-  Can place order online
-  Can manage my cart items
-  Logout

2. Requirement Gathering & Analysis

2.1 Requirement Gathering

I have gathered information about eLearning through the internet, and I found this topic interesting. I assure you that this system will give you more flexibility, reliability as well as financial support.

In this project, I have used the following technology:

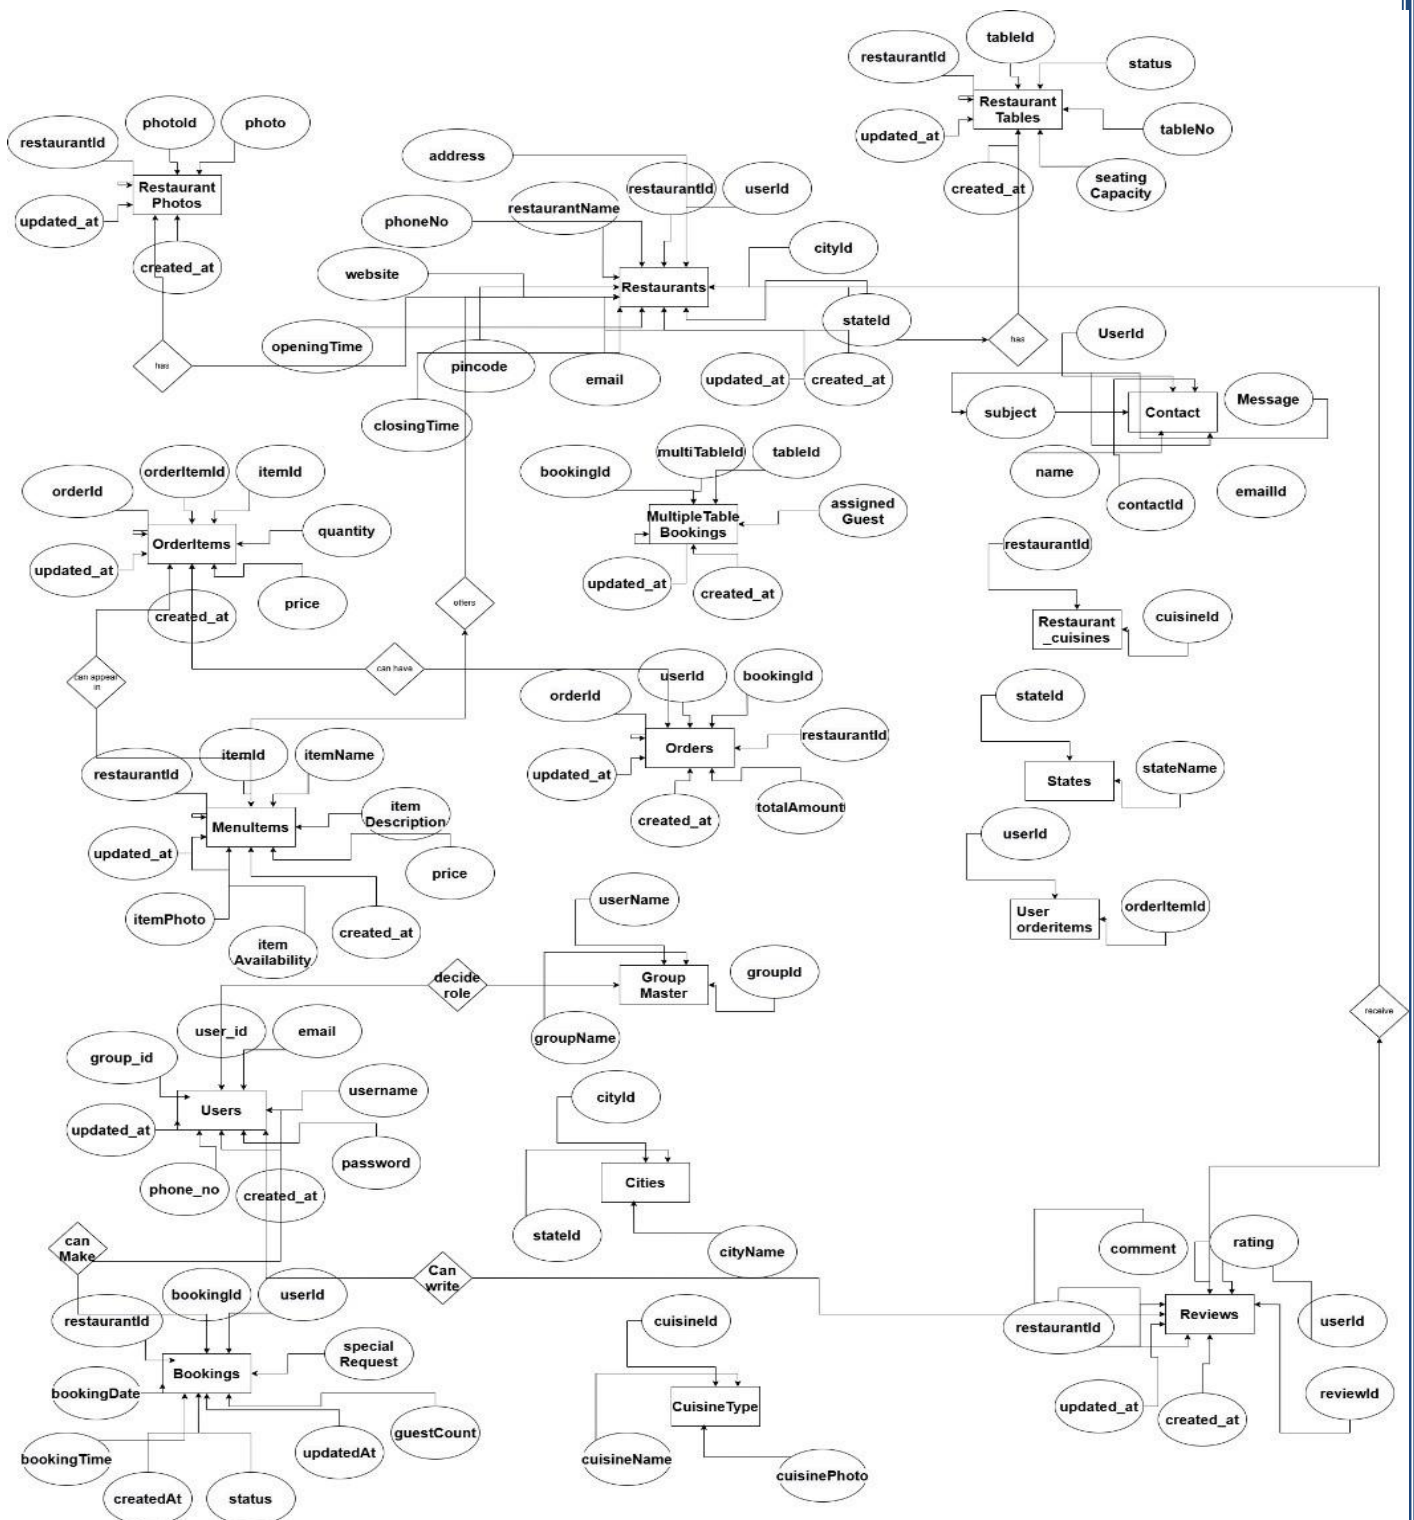

2.2 Feasibility

The feasibility of our project has been judged on the basis of time, technology, and project length.

- **Time:**
This project is roughly 3 months to complete primary functionality, so as far as time is concerned this project is feasible.
- **Technology:**
This project is based on Java with NetBeans. Therefore, the technical risk is negligible so the problem is feasible.
- **Project Size:**
The project size is normal and therefore we have undertaken this project.

4. Interface Design

Admin :-

The screenshot shows a web browser at the URL `localhost:8080/bookMyTable/faces/signin.xhtml`. The page has a title "SIGN IN". On the left, there are two input fields: "Email:" with the text "admin" and "Password:" with masked characters ".....". Below these is a blue "Sign In" button and a link "New User? Register". On the right, there is a large purple rectangular area containing a photo of a smiling woman in a light blue shirt holding a tablet. A small circular icon with a lightning bolt is positioned at the bottom left of this purple area.

The screenshot shows the Admin interface at the URL `localhost:8080/bookMyTable/faces/admin/showCities.xhtml`. The page has a header "BookMyTable" and a welcome message "Welcome, admin". On the left is a sidebar menu with the following items: "Manage city", "Manage States", "Users", "Restaurant reviews", "Manage Cuisines", and "Logout admin". The main content area is titled "List of Cities" and features a green "Add City" button. Below the button is a table with the following data:

About Us

At BookMyTable, we are passionate about revolutionizing the way you dine. Whether you're planning a romantic dinner, a family gathering, or a quick meal with friends, our platform is designed to ensure a hassle-free dining experience.

We aim to bring convenience, transparency, and joy to your dining experiences. By partnering with restaurants across the city, we ensure you have access to diverse cuisines and exceptional hospitality at your fingertips.

In today's fast-paced world, we understand the value of your time and the importance of a great dining experience. That's why we've designed BookMyTable to bridge the gap between diners and restaurants, offering unparalleled ease and efficiency for every occasion.

What We Do

BookMyTable connects you with the finest restaurants in your city, providing an all-in-one solution to:

- **Reserve Tables:** Secure your spot at top restaurants effortlessly, so you can skip the queues and enjoy your time.
- **Explore Menus:** Discover detailed menus with vivid descriptions and images, making it easy to choose your perfect meal.
- **Time-Bound Reservations:** Plan your visits with precision using our time-sensitive booking features.
- **Mobile Verification:** Enjoy secure and reliable reservations with OTP-based mobile verification.
- **Customer Reviews:** Share and explore honest reviews to guide your dining choices.

The screenshot shows the 'BookMyTable' application interface. The top navigation bar includes a search bar and a welcome message for the user 'dhruv'. The left sidebar contains navigation links for Restaurant Details, Restaurant tables, Menu, Bookings, Orders, Review, Setting, and Logout dhruv. The main content area displays a table titled 'List of Tables' with columns for Table ID, Table No., Seating Capacity, Status, and Actions. The table contains one entry with Table ID 21, Table No. 5, Seating Capacity 8, and Status 'available'.

Table ID	Table No.	Seating Capacity	Status	Actions
21	5	8	available	 

The screenshot displays a web browser window with the address bar showing 'localhost:8080/bookMyTable/faces/ownerPages/showRestaurantTables.xhtml'. The browser's address bar and tabs are visible at the top. The page header includes the 'BookMyTable' logo, a welcome message 'Welcome, 35 Ganesh owner', and a search bar with the placeholder text 'Search for orders by ID, food item, or customer name'. A navigation menu on the left lists 'Restaurant Details', 'Restaurant tables', 'Menu', 'Bookings', 'Orders', 'Review', 'Setting', and 'Logout dhruv'. The main content area features a red banner titled 'Update Restaurant Table'. Below this banner, there are three input fields: 'Table No:' with the value '5', 'Capacity:' with the value '10', and 'Status:' with the value 'available'. At the bottom right of the form are two buttons: 'Update' and 'Reset'.
